Booth

Taking the Best of the Indoors Out

Booth is designed to create interaction spaces that are fresh yet familiar, taking the warmth, comfort and intimacy of a widely enjoyed indoor seating experience and reimagining it for the outdoors. It's a social design and familiar typology, intended to define spaces that bring people together and encourage closeness and quality conversation.

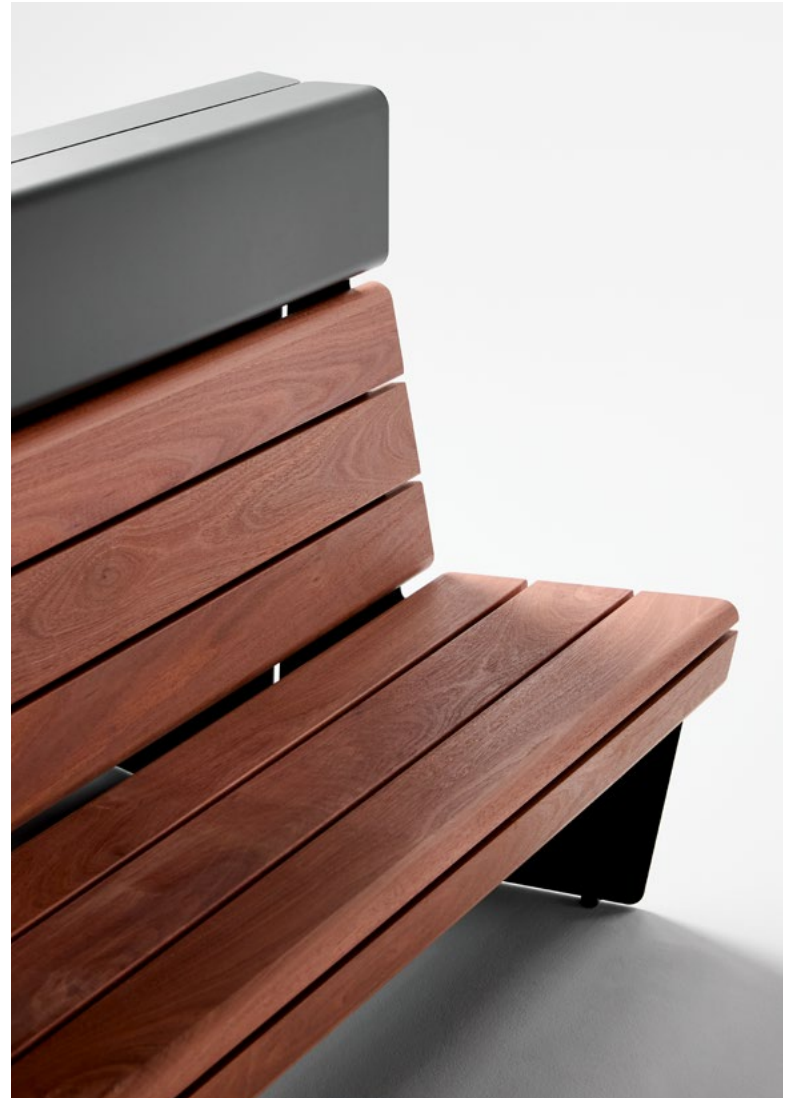

Inviting Interaction

Designed by the Landscape Forms team, the Booth line includes two seating silhouettes—a tall back booth and a low back booth—designed to meet face-to-face in pairs that inspire and enhance interaction. Rounded corners and softened edges create a comfortable character, while a subtle flare to the form of the seat and metal support structure offers a friendly, inviting gesture. Hooks located on both sides of the booth toward the top of the back provide convenient storage for bags and coats. Both the tall back and low back booths feature warm, fillet-edged wood slats for the seat and back, and the design for the tall back booth includes an additional powdercoated metal portion atop the back to enhance a sense of privacy and accentuate the room-within-a-room experience.

Endless Possibilities

Two booths fit tightly together when arranged back-to-back, enabling space-efficient groupings for generous outdoor seating and dining space. Booth can also stand alone as an architectural bench, as an accessible one-sided booth, or against a wall as modern banquette-style seating. This versatility in arrangement coupled with Booth's distinct design focus on balancing openness and accessibility with semi-privacy creates a new wealth of possibilities in the way people engage with outdoor space — from dining, to socializing, to outdoor work and group collaboration.

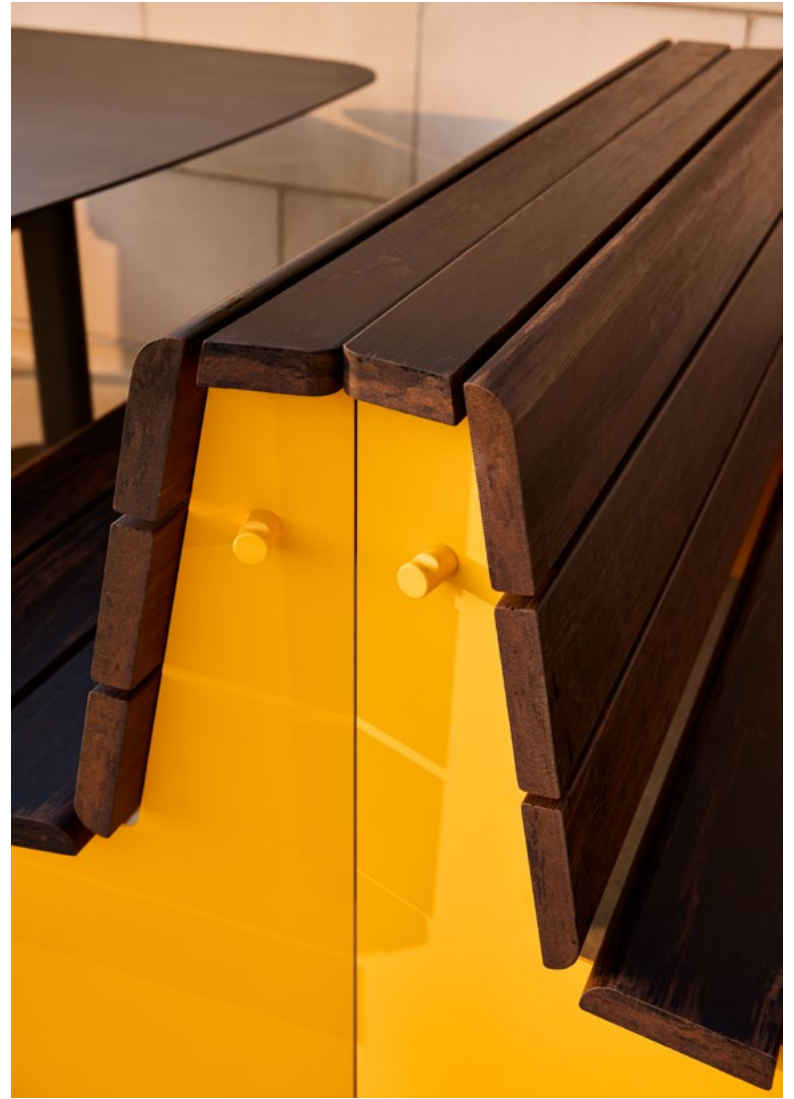

Elegant & Enduring

Booth is offered in a range of sustainable, naturally weathering exterior woods, including a new dassoXTR Fused Bamboo® option engineered specifically for use outdoors. Fused bamboo is incredibly stable and durable, elegantly dark in color, and is sustainable with very low environmental impact. Confidently completing an installation, a table from the Contour line is specially designed to pair with Booth.
