Cove

Elevated Outdoor Structure, Pure and Simple

Great outdoor design begins with simplicity—clear forms, honest materials and intuitive environments that welcome people to come, stay and make them their own. Cove carries this philosophy into practice, redefining the elevated outdoor structure as a streamlined, standardized solution that is straightforward yet elegantly refined. With carefully curated amenities, quality craftsmanship and enduring construction, it creates spaces that are effortless to implement and exceptional to experience.

Beautifully Streamlined

Cove was developed for projects that prioritize speed, simplicity and design integrity. Offered in three preconfigured sizes with a curated palette of standard accessories, it delivers a fully integrated outdoor solution—ready to specify and easy to implement. Clean lines, premium materials and comfort-focused performance features make Cove ideal for hospitality settings, educational and corporate campuses, multifamily residential communities and intimate public environments.

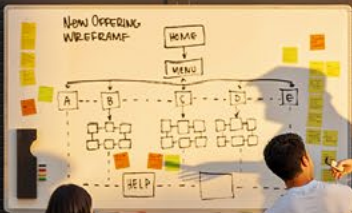

Comfort with Clarity

Cove offers core comforts in a beautifully scaled package. Choose from a fixed metal roof with canvas screen ceiling that brings softness and warmth to the structure's interior, or opt for an automated louvered roof for dynamic shade and weather control. LED lighting, fixed and sliding wall panels, curtains, and power access ensure Cove supports a wide variety of outdoor use cases while maintaining a simplified experience from design through installation.

Adaptability Made Easy

While Cove is designed to minimize complexity, it retains a carefully selected range of options to help shape atmosphere, enhance comfort and support site-specific functionality. Wall panels are available with fixed or rotatable horizontal louvers crafted from powdercoated aluminum or thermally modified ash. Curtains in standard outdoor fabric options offer softness and shade, while warm LED lighting and neatly integrated power make for welcoming ambiance. An optional central fixed roof blade allows for the addition of ceiling fans, heaters or other third-party accessories as needed.

Designed for Simplicity. Built to Last.

Manufactured in the U.S. and supported through final installation by Landscape Forms' dedicated field services team, Cove is engineered for durability, ease of implementation and lasting performance. Its simplified footprint, shorter lead time and BAA and BABA compliance make it a smart solution for projects where speed and space are key considerations—but where design integrity remains essential.

Cove distills elevated outdoor structure into its purest form—simple, versatile, beautifully executed outdoor experiences with elegance in every detail.
